

German Vocabulary Acquisition: The impact of goal orientations on lag effects

Dr. Lisa R. Grimm and Kelly Lennon
The College of New Jersey, Ewing, New Jersey

Our study examined the impact of goal orientation and spacing on language acquisition. Participants completed a goal orientation measure and a German vocabulary acquisition task, where words were presented in either spaced (i.e., Long Lags) or massed (i.e., Short Lags) contexts, followed by a retention test.
